14. (Amended) A method for manufacturing a pneumatic tire as claimed in claim 13, wherein expansion rate of said belt member is 3% or less.

15. (Amended) A method for manufacturing a pneumatic tire as claimed in claim 1, wherein a full-mold vulcanization-molding machine having an upper mold and a lower mold is used as a mold for vulcanizing and molding said green tire.

B5
5/6
C1
17. (Amended) A method for manufacturing a pneumatic tire, comprising:
a step of manufacturing a green tire in which extruded rubber having the shape of a ribbon or a sheet is piled up on a ply and a belt member assembled on a drum to form a tread;
a step of forming a carved groove on a tread surface of said green tire in direction of a lug groove; and

B5 304 a step of charging said green tire formed with said carved groove in a vulcanization-molding machine to carry out vulcanization-molding so as to form a vulcanized tire having the lug groove.

Please add the following new claim:

B5 304 --19. (New) A method as claimed in claim 1, wherein said triangular shape is formed by the step of carving a first groove extending in a direction inclined to an axis of the tire and a second groove extending substantially in parallel with said axis and partly overlapping said first groove.--
